PROFESSIONAL SUMMARY

Aspiring Software Development Engineer with strong foundations in Fullstack Web Development with Python, DBMS, Operating Systems and Data structures-algorithms. Skilled in building backend-driven applications using Python, SQL, and React, with a focus on scalable and efficient systems.

EDUCATION

Malla Reddy College Of Engineering For Women

2022 – 2026

Bachelor of Technology in Computer Science and Engineering

GPA: 8.32

SKILLSET

Programming Languages: Python, C, SQL, JavaScript

Frontend: React.js, HTML5, CSS3

Backend & Databases: MySQL, DBMS

Artificial Intelligence: Artificial Intelligence, Generative AI, Machine Learning , Image Processing , Computer Vision

Tools: Git, GitHub, VS Code,

Soft Skills: Problem Solving, Data structures and algorithms , Team Collaboration, Communication, Leadership Skills

PROJECTS

Work Track

Jan 2026 – March 2026

- Technologies: React, JavaScript, HTML, CSS, Python, MySQL, Git
- Developed a Task Management System for creating, assigning, and tracking project tasks efficiently..
- Implemented user authentication, task updates, deadlines, and progress monitoring features.
- Designed a user-friendly interface to enhance team collaboration and productivity

AI driven Archaeological Site Mapping

Nov 2025 – Jan 2026

- Technologies: Python, Machine Learning, OpenCV, NumPy, Pandas
- Developed an AI-powered archaeological site mapping system using satellite imagery for historical site identification and analysis.
- Applied machine learning and image processing techniques to detect archaeological structures with improved accuracy.
- Enhanced heritage preservation and research efficiency through automated site detection and monitoring.

EXPERIENCE

Infosys Springboard Virtual AI Intern

Nov 2025 – Jan 2026

Remote

- Developed modular AI driven Archaeological Site Mapping in Python following SDLC practices.
- Structured clean, maintainable code using Git version control.
- Integrated data preprocessing pipelines for scalable model deployment.

AICTE Internship: Microsoft-SAP AI Transformative Learning

Jan 2025 – Mar 2025

Remote

- Developed AI-based Plant disease detection system for Sustainable agriculture.
- Used image processing and machine learning to identify crop diseases accurately, helped farmers improve crop health and reduced agriculture losses.

CERTIFICATIONS

- Full Stack Web Development with AI Tools under the Next Gen Employability Program.
- Web Development - Internshala
- Building Modern Web Applications With MERN Stack - Edunet Foundation
